

My brain when I am sitting in a system design interview

Agenda

- Overview of Netflix Recommendation system-design

Difference between system design for Machine Learning Engineers and Software Developers.

Aspect	ML Engineer	SOE
Primary goal	Accurate / Fast prediction stable data flow / feature pipeline	Reliable feature delivery, interconnectivity diff of software, Accurate API struct
Artifacts	Models, Feature, training Code;	API, Service, DB
Variability	Drifts	API Req. / Response Validation
Metrics	Offline (Online metr	Latency, Throughput

Where do we start??

Mlops — CLARIFYING.

① Expected # of Users
1 Billion Users
DAU 200 million Users

② Expected no. of Videos
1 million

③ # of Videos to be uploaded : 1000

④ # of times user accesses netflix : 5

"Password Incorrect"

"Password Incorrect"

resets password

"Your password cannot be
your previous password"

Why UX research is important

$$\frac{200 \times 10^6 \times 5}{24 \times 60 \times 60} = 12K \text{ req. per second.}$$

LLD $\rightarrow$ low level design $\rightarrow$ Implementation detail

HL D $\rightarrow$ High level design $\rightarrow$ architecture details

2022 $\rightarrow$ GPT

Accuracy Vs Latency

1 FUNCTIONAL REQUIREMENTS

1. Users should be able to stream video on the platform (pause/resume video playback) .
2. Users should be able to rate/like/dislike/comment on a video/movie.
3. Personalized, and non-personalized recommendation.
4. Users should be able to search video on the platform.
5. Need to provide different video quality options.
6. Producers, directors to be able to upload video on the platform.
7. Should be available on platforms like iOS/Android/Web.

2 NON-FUNCTIONAL REQUIREMENTS

- ① V. low latency & high availability.
- ② Scalable & Efficient
- ③ Slick UI / easy to interact with.

In the context of system design, what refers to the overall view of the system, including architecture, applications, and database management?

0 users have participated

A

Low-Level Design (LLD)

0%

B

High-Level Design (HLD)

0%

C

System Data Flow

0%

D

Component Execution

0%

1/1 ⚡ 98.90

Yadwinder kaur

1/1 ⚡ 89.77

4	Vidhyashankar M	1/1 ⚡ 85.42
5	J. Ramesh Reddy	1/1 ⚡ 82.83
6	Jigar	1/1 ⚡ 82.60
7	Manikandan A	1/1 ⚡ 79.03

What is an essential aspect of system design in regards to understanding its scale?

6 users have participated

A

Estimating the color palette for the UI

0%

B

Programming language to be used

0%

C

Making reasonable assumptions about system metrics like requests per day or database calls

100%

D

Selecting a font style for documentation

0%

2/2 ⚡ 193.09

Yadwinder kaur

2/2 ⚡ 181.36

4	Vidhyashankar M	2/2 ⚡ 175.00
5	J. Ramesh Reddy	2/2 ⚡ 171.90
6	Manikandan A	2/2 ⚡ 170.76
7	Jigar	2/2 ⚡ 161.37
8	K. Janani	1/2 ⚡ 94.17
9	shreyas	1/2 ⚡ 91.44
10	Kuntal Kole	1/2 ⚡ 87.60

Different components in our MVP

- ✓ 1. Data Sources.
- ✓ 2. Data Ingestion Pipeline
- ✓ 3. Data Storage Systems.
- ✓ 4. Data Processing and Feature Engineering.
- 5. Recommendation Engine.
- 6. API Layer.
- ✓ 7. Caching
- ✓ 8. Monitoring and Logging.
- 9. Security and Compliance.

① Data Sources

② Users / User-item Interaction.

- (i) Like / dislike / review / ratings / comments
- (ii) Watch history
- (iii) Age, gender, demographics, Language
- (iv) User Interaction
- (v) Wish list / watch list
- (vi) Daily time spent

③ Content DB

- (i) Movies / Shows (Genre, director, casts, title, duration, ratings, Kids, 18+ description,
- (ii) Release Year
- (iii) Technical specification - 4K / 1080p 24p...
- (iv) Content popularity metrics → IMDB, Rotten tomato

(w) External data → ① Social media friends
 ② Famous third party reviews

2 DATA PIPELINE

}
```

What is the main difference between horizontal scaling and vertical scaling?

0 users have participated

- A Horizontal scaling adds more machines, while vertical scaling adds new software. 0%
- B Horizontal scaling adds physical locations, while vertical scaling focuses on security enhancements. 0%
- C Horizontal scaling adds resources to a single machine, while vertical scaling adds more machines. 0%
- D Horizontal scaling adds more machines, while vertical scaling adds resources to a single machine. 0%

What is the role of a Content Delivery Network (CDN) in video streaming?

0 users have participated

- ☐ A To slow down the delivery of content to manage server load 0%
- ☐ B To provide a single centralized server for content storage 0%
- ☒ C To offer geographically distributed servers for fast content delivery 0%
- ☐ D To increase internet connection speeds universally 0%

End Quiz Now

Which component of Netflix's recommendation system uses an item-item similarity matrix to suggest content?

0 users have participated

- ☐ A Trending Now algorithm 0%
- ☐ B Award-Winning Comedies selector 0%
- ☒ C Video-Video Similarity Ranker a.k.a Because You Watched (BYW) 0%
- ☐ D Continue Watching functionality 0%

Uber
 Mar 22, 2026, 12:00 AM

Data Scientist Onsite Machine Learning

Design an end-to-end machine learning approach to predict **driver acceptance probability** in a ride-sharing or delivery marketplace.

1. Why uber wants to predict this?
2. What DB might we need, what data might we need?
3. What model might you want to use?

1. to get accurate time estimate for getting the cab
2. Enhance driver exp, by not sending them requests they're likely to reject.
3. Get the cab quickly to the user.

Driver Features:

1. Ratings
2. # of Trips
3. online-hours
4. Tenure
5. Avg distance of ride he takes
6. Vehicle Type
7. Recent acceptance rate for the rides
8. Recent cancellation rates for the rides
9. # of Airport Rides

Ride Features:

1. Traffic Density
2. Distance (driver is, to pickup)
3. Duration of Ride
4. Distance of ride (passenger's location to dest)
5. Weather.
6. Payout
7. Tip
8. Time
9. Surge Amount
10. Mode of payment
11. user-feature (avg-rating)
