

QA watching devs work on weekends after assigning critical bugs on friday evening.

AGENDA

1 End to End deployment using CI/CD

2 Optional if you guys are up for it 😈 - Deploying flask app on EC2

Steps for Deploying on ECS

1. Get/Create Access Key, and Secret Access Key from IAM (Has to be done Manually, once)
2. Containerize our image and push to ECR (Need to create a repo in ECR, pushing can be automated)
3. Create Cluster in ECS (This has to be done manually, but only once, in the beginning)
4. Create Task Definition (This will be automated)
5. Assign task to cluster and deploy (This will be automated)

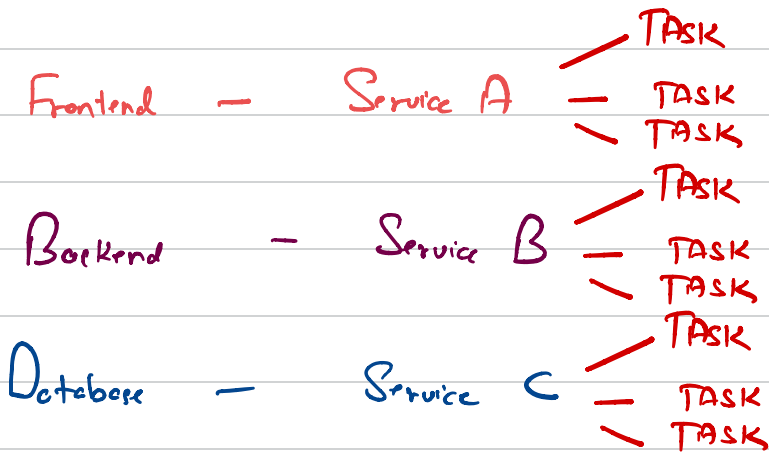

Service (Backend)

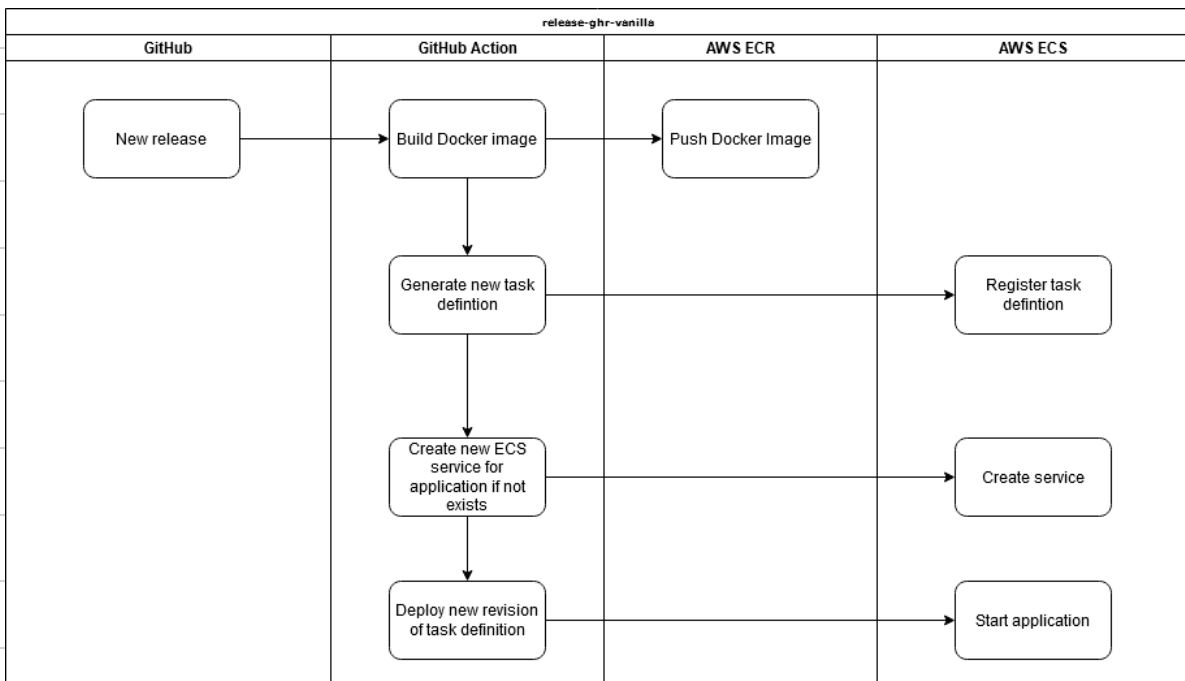

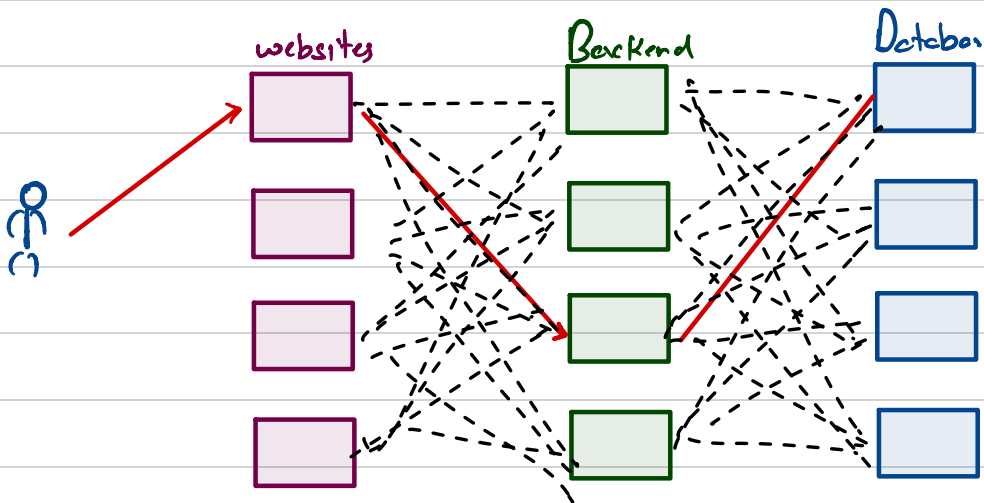

Task - Container 1

Task - Container 2

Task - Container 3

Cluster

In GitHub Actions, what is an "event" that can trigger a workflow?

0 users have participated

- A

An operational malfunction within the workflow's execution environment.

0%
- B
