

AGENDA

- ① Git
- ② Github
- ③ Terminologies (Project) - Push, Pull, Commit
- ④ Branching
- ⑤ Conflict Resolution
- ⑥ Contribute to open source projects

MLOps

1. Git-HUB
2. Build an ML application - Deploy it using Streamlit
3. Deploy ML Endpoint -APIs, Flask/FastAPI.
4. Docker - Container, container-ize it.
5. CI/CD - 2 Classes.
6. Experiment Tracking - MLFLOW.
7. System-Design (DRIFT , Netflix Recommendation)
8. SageMaker - AWS
9. Apache Spark

MLOps vs DevOps debate

Is MLOps actually like DevOps?

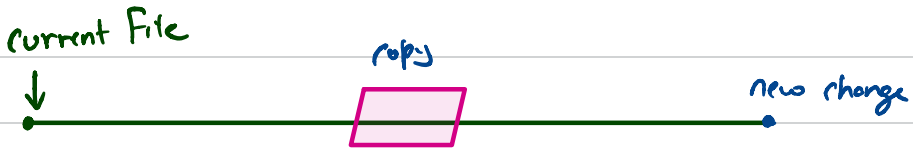

GIT - Open Source Version Control System

Email → Gmail
Yahoo
Zapier
Proton

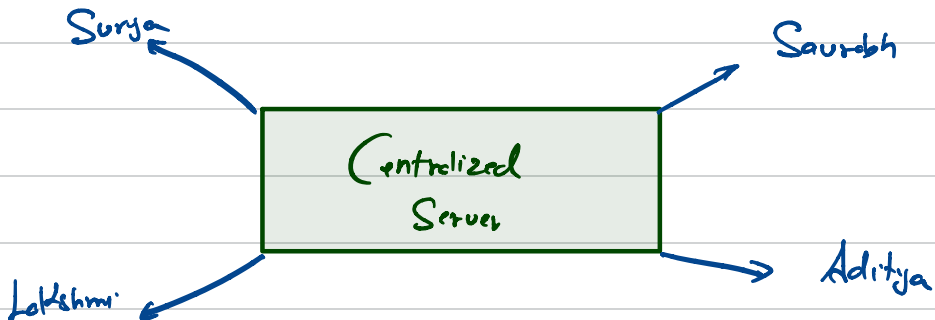

GIT → Github (Microsoft)
Gitlab (Gitlab)
Bitbucket (Atlassian)
Code-Commit (Amazon)

model.ipynb

Different Types of GIT/Version Control System

1. Centralized Version Control System

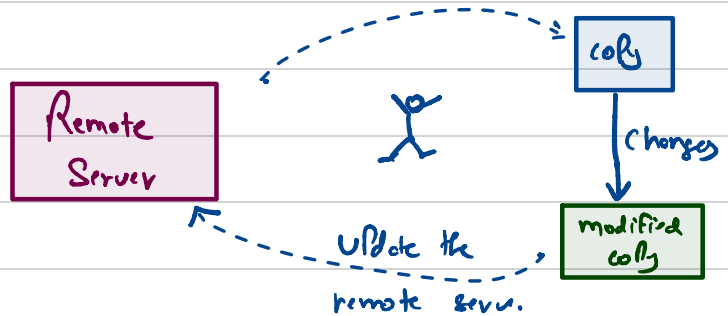

Pros:

1. Maximum/High Security.
2. Everyone gets latest code, no old-code base.
3. No conflicts.
4. Real time update and monitoring.

Cons:

1. Central Point of Failure.
2. Scalability Issues.
3. No offline capabilities.

2. Distributed Version Control System

Pros:

1. High Concurrency.
2. Very scalable.
3. Offline Capabilities.
4. Disaster Recovery.

Cons:

1. Less Security.
2. Conflicts.

GITHUB

What is Git?

0 users have participated

- ☐ A A nickname for GitHub. 0%
- ☐ B A programming language. 0%
- ☐ C A remote repository platform. 0%
- ☒ D A version control system. 0%

4	Saravankumar Kannan			1/1	94.93
5	K. Janani			1/1	94.43
6	J. Ramesh Reddy			1/1	94.37
10	Sakthi Rajalakshmi M			1/1	94.33

Which of the following is true about Centralized version control system??

0 users have participated

- ☐ A It does not rely on the central server 0%
- ☐ B It is victim to single point of failure 0%
- ☐ C It rely on the central server 0%
- ☒ D Both B & C 0%

7	Nagaraj S H	2/2	181.70		
8	Kuntal Kole	2/2	180.66		
9	J. Ramesh Reddy	2/2	177.53		
10	Veeresh	2/2	158.57		

GIT Terminologies

1. Repository: Fancy word for a folder that contains code/documents, etc.
2. Local Repository: Folders on my local computer that's may/may not have synced to the remote repository.
3. Remote Repository: Canonical copy of my codebase on any remote VCS.

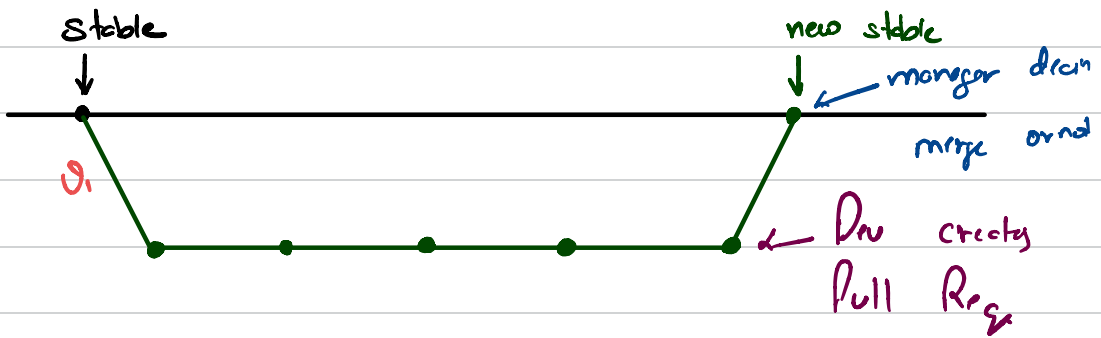

Commands

1. Commit: Fancy word for "save".
2. Fetch: This commands check remote repo for any new changes, you just note down those changes, but don't update the local repo with new changes.
3. Pull: This command updates the local repo with remote repo.
4. Push: You update remote repo, with new changes from local.

Branches

- ① Latency
- ② Search results
- ③ UI
- ④ LLM - AI mode

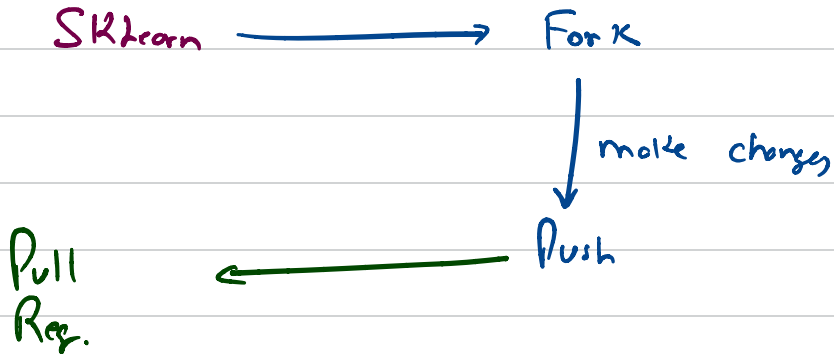

In Git, a branch is:

0 users have participated

- A A secret part of Git config. 0%
- B A separate version of the main repository. 0%
- C A remote repository on someone else's account 0%
- D A new repository with no code in it 0%
